iRISupply RE for Vocera Battery Tracking

iRISupply RE for Vocera Battery Tracking allows healthcare providers to securely store and manage Vocera device batteries. The system uses a combination of RFID-enabled cabinets and software to track the chain of custody of Vocera batteries as they are used throughout the health system.

The system's smart cabinets keep Vocera batteries locked down while they are charging. Whenever users swap out their batteries, the cabinets automatically detect how many batteries were taken and how many batteries were returned. Because employees can only open the smart cabinet after scanning their badge, the system can effectively restrict the number of batteries that a user can borrow at any given time. Real-time alerts and automated reports allow administrators to reduce the number of Vocera batteries they keep in circulation by holding employees accountable for any missing or lost batteries.

Features and Benefits

- Saves money by tracking and managing your inventory of Vocera batteries more efficiently to reduce the need for replacement batteries
- Holds employees accountable by tracking how many batteries they borrow and sending alerts when thresholds are breached
- Keeps Vocera batteries securely locked down while they re-charge and restricts access to only authorized employees
- Reports and analytics to encourage the proper employee behaviors and track battery end-of-life
