iRISecure - Specimen

iRISecure - Specimen is a powerful, simple-to-use RFID tracking solution for fluid and anatomical specimens that helps to improve patient care by preventing the loss of samples and ensuring the timely delivery of lab results.

iRISecure - Specimen can help accelerate the time it takes to test a specimen and return results for each and every sample. By removing many of the manual steps involved in tracking specimens and increasing communications between disparate groups, the tracking system speeds up the time to turnaround lab results.

The costs to a healthcare institution can be severe whenever a specimen is lost or misplaced. iRISecure - Specimen can improve finances and increase efficiencies by eliminating the need for repeat procedures, bolstering patient satisfaction and speeding the time to deliver lab results to providers and patients.

Features and Benefits

- Fully integrated with EHR orders (ORM interface) to associate patient information with specimen at time of procedure
- Ability to scale across a health system including procedural areas, satellite surgery facilities, and ambulatory centers
- Robust alert system to instill accountability amongst clinical staff, lab technicians and transporters
- Reports and analytics that allow healthcare systems to identify bottlenecks and inefficiencies in their process to continuously improve their operations
