## Mobile Aspects Launches Comprehensive Software-First Platform to Transform Healthcare Tracking and Documentation

*Scalable software solution, Trace, addresses complex logistical challenges across academic health systems, improving patient care through enhanced operations, regulatory compliance, and cost savings*

**PITTSBURGH, PENNSYLVANIA – August 26, 2025** – Mobile Aspects, a leader in healthcare logistics solutions, today announced its software-first platform, Trace, designed to revolutionize how academic health systems track and manage biologics, supplies, and equipment. The Trace software solution allows hospitals and health systems to implement easy-to-use documentation and logistics across their enterprise quickly and at low costs.

### Addressing the Critical Healthcare Challenge of Tracking Processes

Healthcare executives face mounting pressure as supply costs continue to rise while manual tracking processes create operational bottlenecks, compliance risks, and threats to patient safety. Mobile Aspects' software-first approach tackles these challenges head-on with a scalable platform that works across multiple use cases, departments, and hospitals throughout entire academic health systems.

*"Better tracking means better hospitals – and the best care," said **Suneil Mandava, CEO at Mobile Aspects**. "Our software platform solves the most complex tracking needs across healthcare systems, providing full visibility on inventory status, costs, and compliance, whether implemented as a standalone solution or enhanced with specialized hardware. Even better – it's easy to use and easy to deploy across the entire health system quickly."*

### Comprehensive Software Suite

Mobile Aspects' software-first platform includes five core solutions:

**SupplyTrace** automates supply and inventory management, addressing the second-largest cost center in healthcare operations. The platform integrates with EMR, materials management, and billing systems to provide automated documentation and inventory oversight. Customers typically achieve ROI within 1-2 months through improved cost savings, better cash collections, and optimized staff utilization

# FOR IMMEDIATE RELEASE

**TissueTrace** provides precise tracking of biologics including tissue, blood, and specimens. The platform features electronic compliance logs, comprehensive tracking of ambient, refrigerated, and frozen materials, digital access control for high-cost items, and seamless EMR/HIS integrations. Healthcare facilities report significant improvements in Joint Commission compliance while reducing waste and enhancing patient safety.

**ScopeTrace** is the only software solution that tracks the entire roundtrip of scope from storage to patient use, to cleaning and even repairs. ScopeTrace simplifies the complex regulatory requirements surrounding endoscope management. The solution provides complete tracer logs for regulatory surveyors, electronic documentation of all scope-related activities, and real-time alerts to prevent compliance failures. Healthcare systems achieve standardized processes for cleaning, testing, and decontamination while preventing cross-contamination risks.

**SpecimenTrace** accelerates lab result turnaround times by preventing specimen loss and ensuring efficient delivery for testing. The platform eliminates manual tracking steps, improves communication between departments, and provides real-time alerts when specimens exceed time limits between checkpoints. Healthcare systems experience reduced re-draws and patient callbacks, faster specimen processing, and improved accuracy in documentation while delivering measurable ROI through increased efficiency and reduced specimen loss.

**BloodTrace** ensures the right blood reaches the right patient every time through automated documentation and comprehensive inventory management. The platform performs periodic safety checks along a blood bag's chain of custody, provides real-time expiration monitoring, and prevents stockouts through accurate usage documentation. Healthcare facilities report enhanced patient safety, improved inventory control, and significant reduction in manual data entry while maintaining compliance with AABB and FDA regulations.

## ***Flexible Implementation Advantage***

Unlike traditional healthcare technology solutions limited to specific supply types or functions, Mobile Aspects' software platform offers flexible deployment options that work with existing hardware infrastructure. For enhanced automation, the platform can be integrated with the company's purpose-built RFID cabinets, providing healthcare systems with scalable solutions that grow with their needs.

*"Our software is designed to understand your biggest tracking and logistical bottlenecks and provide customizable solutions for improvement, regardless of your current hardware infrastructure," added Mandava. "This flexibility allows healthcare systems to implement uniform and measurable processes across hospital units system-wide."*

# FOR IMMEDIATE RELEASE

## *Proven Impact*

Healthcare systems implementing Mobile Aspects' software platform report significant improvements across key performance indicators:

- **Operational Efficiency:** Automated processes eliminate manual documentation burdens and reduce administrative costs
- **Compliance:** Electronic logs and real-time tracking ensure regulatory compliance including Joint Commission requirements
- **Cost Savings:** Improved charge capture accuracy, reduced inventory waste, and better staff efficiency deliver measurable ROI
- **Patient Safety:** Enhanced tracking prevents cross-contamination, ensures proper blood transfusion timing, and maintains specimen integrity
- **Staff Satisfaction:** Process improvements reduce frustrations and allow healthcare workers to focus on patient care

## *About Mobile Aspects*

Founded in 2000, Mobile Aspects solves the most complex logistical challenges in tracking and documentation for biologics, supplies, and equipment through its innovative software platform. The company's flexible solutions can be deployed with existing infrastructure or enhanced with specialized hardware. Through its data-driven approach, Mobile Aspects helps academic health systems improve operations, compliance, cost savings, and patient care.
